## Input guide Dirt Rally 2.0

Firstly you must go into the game setup tab inside Racehub. Here you must click on the folder icon next to Dirt Rally 2.0 and select the file location for your installation of the game. You also need to define an output port, this must be between 20100 and 21000.

	0						Settings	Store	Support	
	Steering Wheel	Settings	General	Game Setup	Info					
	Wheelbase High Torque	For some games to function with Asetek SmSports steering wheels, communication needs to be enabled between RaceHub and the game. Some games will also need patches applied for wheelbase force-feedback to function. Detected Games

Here a list of your devices will show up. Start by choosing the wheelbase and edit the device.

Next go into the advanced settings tab. Here you must set the device type to steering wheel.

Then choose the input bindings tab and assign the controls for steer left and steer right.

Next go back to the list of devices. Then choose the steering wheel.

Then go into the advanced settings tab and set the device type to controller.

Go back to the input bindings tab and assign the controls for shifters, handbrake etc.

Next go back to the device list and choose the pedals.
