# Standard Retention Kit Installation Instructions
## Intel LGA20XX (Narrow)

Intel LGA20XX narrow retention ring

Retention ring clip
– for use with Gen4 Asetek pump

Standoffs with attached screw nuts

Step 1
Insert the screws into the openings of the retention ring.

Step 2
Secure retention ring to the pump / block combo. Attach from the side that will contact the CPU. Swivel and click into place. NOTE: For Asetek Gen4 pumps, use the plastic retention clip to secure the pump to the retention ring after it is placed in the desired orientation.

Step 3
Install fans to radiator and install radiator in case. Orient the fans as intake if you want the best performance.

Step 4
Align the screws with the threaded holes around the socket. Place the pump/block onto the CPU.

Step 5
While holding the pump/block combo on your CPU, tighten down the four (4) thumbnuts with your fingers and then tighten them down with a screwdriver.

Step 6
Connect the fans to appropriate headers on the moth-erboard. Connect the pump to CPU_FAN header on your motherboard.
